

QUEDERA BEACON

Central Products & Subscriptions Hub

Product Requirements Document

A central customer-facing location for discovering, accessing and managing the QUEDERA portfolio.

Pulse | Duet | Atlas | Beacon

Document Control	Value
Document	BEACON Central Products & Subscriptions
Version	1.0
Status	Draft Requirements
Owner	QUEDERA Product
Primary Product	QUEDERA Beacon
Audience	Product, UX, Engineering, Customer Success, Sales

1. Executive Summary

QUEDERA Beacon should evolve from an executive insight and dashboard product into the central customer-facing hub for the complete QUEDERA portfolio. The hub will provide each customer with a single, coherent location to discover the products and capabilities they own, understand subscription status, access reports and dashboards, manage product access, and navigate into the appropriate QUEDERA product.

The experience should retain Beacon as the primary product brand while clearly representing the four QUEDERA products: Pulse, Duet, Atlas and Beacon. Product-specific experiences remain distinct, but customers should not need to understand the underlying product architecture to find what they need.

1.1 Product vision

Beacon becomes the customer's QUEDERA control centre: one place to understand what they have, what is active, what requires attention, and where to go next.

1.2 Core outcomes

- Provide one authenticated entry point to the QUEDERA portfolio.
- Give customers a clear view of products, subscriptions, entitlements and renewal dates.
- Provide a central catalogue of dashboards, reports and scorecards across all QUEDERA products.
- Make product status, service status and key actions visible at a glance.
- Support customer administrators in managing users and product access.
- Preserve strong product identity while establishing Beacon as the portfolio-level experience.
- Create a scalable foundation for future QUEDERA products without redesigning the navigation model.

2. Scope

2.1 In scope

- Customer-level Beacon home/dashboard.
- Products and product detail pages.
- Subscriptions, plans, licences and entitlement status.
- Central Reports & Dashboards library.
- Cross-product search and filtering.
- Recent, favourite and recommended content.
- Customer and user access context.
- Notifications and action-required states.
- Deep links into Pulse, Duet and Atlas.
- Beacon's own dashboards, reports and executive insights.
- Role-based visibility and access controls.
- Audit-friendly activity and subscription history.

2.2 Out of scope for the initial release

- Full billing/payment processing.
- Replacing the operational functionality of Pulse, Duet or Atlas.
- Building a new identity provider.
- Full CRM functionality.
- Customer contract authoring.
- Advanced analytics authoring across every product.

3. Proposed Information Architecture

Primary area	Purpose	Key content
Overview	Portfolio-level customer landing page	Portfolio health, actions, product status, subscription summary
Products	Discover and access products	Pulse, Duet, Atlas, Beacon; capabilities; status; access
Reports & Dashboards	Central reporting library	Dashboards, reports, scorecards, product filters, favourites
Subscriptions	Understand commercial/entitlement position	Plan, status, seats, dates, entitlements, renewal
Insights	Cross-product executive view	KPIs, trends, risks, recommendations
Administration	Customer administration	Users, roles, product access, groups, audit
Settings	Customer preferences	Notifications, profile, display and organisation settings

4. Branding & Product Architecture

Beacon should be the umbrella experience, but each product must retain its own product identity. The interface should use QUEDERA as the master brand and the established product names as first-class product brands.

Brand layer	Requirement
Master brand	QUEDERA branding remains persistent in global navigation and authenticated shell.
Hub brand	BEACON is positioned as the central intelligence and portfolio hub.
Pulse	Retain QUEDERA Pulse identity for ITSM maturity and continual improvement.
Duet	Retain QUEDERA Duet identity for structured service transition.
Atlas	Retain QUEDERA Atlas identity for SaCM/CMDB discovery and validation.
Beacon	Retain QUEDERA Beacon identity for executive dashboards and actionable insights.
Visual system	Shared typography, spacing, accessibility, components and interaction patterns; product-specific accent/iconography where appropriate.

4.1 Recommended brand hierarchy

QUEDERA → BEACON → Product Portfolio → Product → Capability → Report/Dashboard

This hierarchy should be visible in page titles, breadcrumbs and product cards without creating unnecessary navigation depth.

5. Users & Roles

Role	Primary needs	Typical permissions
Executive	High-level insight, risk, performance and strategic dashboards	View assigned products/content
Service Manager	ITSM, transition, CMDB and operational reports	View; possibly contribute depending on product
Product/Platform Owner	Product status, adoption and data quality	View and manage relevant product content
Customer Administrator	Users, roles, subscriptions and access	Manage users/access; view subscription information
QUEDERA Consultant	Deliver services and review customer outcomes	Scoped customer/product access

6. Functional Requirements

ID	Area	Requirement	Priority
FR-001	Customer Context	Beacon shall identify the active customer/organisation and display it prominently in the authenticated shell.	Must
FR-002	Portfolio Overview	Beacon shall display all products available to the customer, including products not currently subscribed to where discovery is permitted.	Must
FR-003	Product Status	Each product card shall show subscription/access state such as Active, Trial, Expiring, Suspended or Not Subscribed.	Must
FR-004	Product Access	Users shall be able to launch a product directly from its Beacon product card or detail page when entitled.	Must
FR-005	Product Detail	Each product shall have a standard detail view containing description, capabilities, subscription status, users/access and relevant content.	Must
FR-006	Subscriptions	Beacon shall provide a consolidated view of subscriptions across Pulse, Duet, Atlas and Beacon.	Must
FR-007	Subscription Dates	Beacon shall display plan start/end dates, renewal dates and relevant status indicators where data is available.	Must
FR-008	Entitlements	Beacon shall show product entitlements such as modules, environments, seats or usage allowances where applicable.	Should
FR-009	Reports Library	Beacon shall provide a central searchable library of reports, dashboards and scorecards across all QUEDERA products.	Must
FR-010	Filtering	Users shall be able to filter reporting content by product, type, status, owner and date where applicable.	Must
FR-011	Search	Users shall be able to search report/dashboard title, description, product and relevant metadata.	Must
FR-012	Favourites	Users shall be able to favourite products, dashboards and reports.	Should
FR-013	Recently Viewed	Beacon shall show recently accessed content for the current user.	Should
FR-014	Deep Linking	Beacon shall support deep links into the originating	Must

		product while preserving customer context.	
FR-015	Cross-Product Insights	Beacon shall surface selected executive insights across the portfolio without duplicating the full product experience.	Should
FR-016	Notifications	Beacon shall present actionable notifications relating to subscriptions, access, product status and important reports.	Should
FR-017	Administration	Authorised customer administrators shall be able to manage user access to products and content.	Must
FR-018	Access Control	All product and content visibility shall respect customer, user, role and entitlement permissions.	Must
FR-019	Audit	Material access and administration actions shall be auditable.	Must
FR-020	Responsive UX	The central hub shall support desktop and tablet layouts; mobile support should be considered for a later phase.	Should

7. Beacon Home / Overview Requirements

- Header: QUEDERA + Beacon identity, customer selector/context, notifications, help and user profile.
- Portfolio summary: number of active products, subscriptions requiring attention and key portfolio actions.
- Product cards: Pulse, Duet, Atlas and Beacon with product purpose, status, key metrics and primary action.
- Action centre: renewal approaching, access request, report available, data quality issue or transition milestone.
- Executive highlights: selected cross-product KPIs and trends.
- Recent content: recently viewed dashboards/reports.
- Favourites: user-selected products and reporting content.
- Quick links: Reports & Dashboards, Products, Subscriptions and Administration.

8. Product Detail Requirements

Section	Example content
Identity	QUEDERA Pulse / Duet / Atlas / Beacon, product description, iconography
Status	Active, Trial, Expiring, Suspended, Not Subscribed
Subscription	Plan, renewal date, entitlement summary
Capabilities	Modules/features included
Users	Assigned users and access level, subject to permissions
Content	Relevant dashboards, reports, scorecards and recent activity
Health	Product/service status where available
Primary action	Open Product / Manage Access / Contact QUEDERA

9. Subscription Centre Requirements

The Subscription Centre should provide a single commercial and entitlement view rather than requiring a customer administrator to visit each product separately.

- List every subscription associated with the customer.
- Show product, plan/tier, status, start date, renewal/end date and account owner.
- Highlight subscriptions requiring attention.
- Show included entitlements and consumption where supported by the source product.
- Provide access to relevant product documentation or contact/support action.
- Support role-based visibility so commercial information is not exposed to unauthorised users.

10. Central Reports & Dashboards Requirements

Capability	Requirement
All Content	Unified view of dashboards, reports and scorecards from all entitled products.
Product filter	Pulse / Duet / Atlas / Beacon.
Content type	Dashboard / Report / Scorecard / Executive Insight.
Search	Title, description and metadata.
Sort	Name, product, type, last updated and relevance.
Actions	Open, favourite, share where permitted, more actions.
Product context	Every item clearly identifies its originating product.
Access	Only show or open content the user is entitled to access.
Freshness	Display last updated date and, where relevant, data freshness.

11. UX & Navigation Principles

- Beacon should feel like a control centre, not a fifth operational product competing with Pulse, Duet or Atlas.
- The global navigation should remain stable regardless of which product is selected.
- Product identity should be visible at the point of discovery and access.
- Use consistent card, table, filter, status and notification patterns across the hub.
- Minimise duplicate navigation: once inside a product, users should experience that product's native workflow.
- Always show the active customer context to prevent cross-customer confusion.
- Important actions should be explicit and understandable without product-specific knowledge.

12. Non-Functional Requirements

ID	Category	Requirement
NFR-001	Security	All requests must enforce customer and user entitlement boundaries server-side.
NFR-002	Performance	The Beacon home page should target a responsive initial experience and progressively load secondary content.
NFR-003	Availability	The hub should meet the agreed QUEDERA SaaS availability target.
NFR-004	Accessibility	Target WCAG 2.2 AA for core customer journeys.
NFR-005	Auditability	Administrative and access-sensitive actions must generate audit records.
NFR-006	Scalability	Architecture must support adding future QUEDERA products without redesigning the core information architecture.
NFR-007	Observability	Product integrations and content synchronisation failures must be detectable and diagnosable.
NFR-008	Data Integrity	Subscription and entitlement status must have a defined authoritative source.

13. Integration & Data Requirements

Beacon should consume authoritative product and subscription metadata through well-defined service interfaces. The hub should not become the system of record for operational data owned by Pulse, Duet or Atlas.

Domain	System of record	Beacon responsibility
Product catalogue	QUEDERA platform service	Display product metadata and availability
Subscriptions	Subscription/commercial service	Display status, dates and entitlements
Identity	Enterprise identity service	Authenticate and provide user identity
Authorisation	QUEDERA access-control service	Enforce product/content permissions
Pulse data	QUEDERA Pulse	Surface approved metrics/content
Duet data	QUEDERA Duet	Surface approved metrics/content
Atlas data	QUEDERA Atlas	Surface approved metrics/content
Beacon data	QUEDERA Beacon	Own and render executive insights

14. MVP Acceptance Criteria

- A customer can sign in and immediately see their QUEDERA product portfolio.
- Pulse, Duet, Atlas and Beacon are presented consistently and retain recognisable product branding.
- A user can identify which products they are entitled to access.
- An authorised customer administrator can view consolidated subscription status.
- A user can find a report/dashboard without knowing which product owns it.
- A user can filter reporting content by product and content type.
- A user can open an entitled report/dashboard and be taken to the correct product context.
- Unauthorised users cannot access products or content through direct URLs or manipulated requests.
- Subscription or product status requiring attention is clearly surfaced.
- The architecture allows a future QUEDERA product to be added through configuration/integration rather than a fundamental navigation redesign.

15. Recommended Delivery Phases

Phase	Focus	Outcome
Phase 1 – Foundation	Beacon shell, customer context, product catalogue, navigation, access control	Single authenticated QUEDERA portfolio entry point
Phase 2 – Reports Hub	Central dashboards/reports, search, filtering, favourites, recent content	One place to find all customer reporting
Phase 3 – Subscriptions	Plans, entitlement status, renewal dates, admin views	Consolidated subscription centre
Phase 4 – Insights	Cross-product KPIs, action centre, executive portfolio view	Beacon becomes portfolio intelligence layer
Phase 5 – Optimisation	Recommendations, usage analytics, advanced administration	More proactive customer experience

16. Key Risks & Decisions

Topic	Risk / decision required
Brand hierarchy	Confirm whether Beacon is the visible umbrella brand or simply the technology hosting the portfolio hub.
Subscription source	Confirm authoritative commercial/subscription system and API contract.
Identity	Define SSO, customer tenancy and cross-product session behaviour.
Entitlements	Standardise how each product exposes plans, modules, seats

	and access state.
Content metadata	Agree common metadata model for dashboards/reports across products.
Cross-product metrics	Define which metrics Beacon may aggregate and how freshness is represented.
Admin model	Agree customer administrator vs QUEDERA administrator responsibilities.

17. Suggested Beacon Hub Layout

- Global header: QUEDERA / BEACON, customer selector, notifications, help, profile.
- Left navigation: Overview, Products, Reports & Dashboards, Subscriptions, Insights, Administration, Settings.
- Overview: portfolio health + four product cards + action centre + recent/favourite content.
- Products: four branded product cards with status, subscription summary and Open Product action.
- Reports & Dashboards: unified searchable table/grid with Product and Type filters.
- Subscriptions: consolidated subscription cards/table with status and renewal information.
- Insights: executive cross-product view with drill-through to originating products.

18. Open Questions

1. Should non-subscribed products be visible for discovery, or only subscribed products?
2. Should Beacon allow customers to request additional products/subscriptions?
3. Who owns the customer/product access model?
4. Should subscription pricing be visible to customer administrators?
5. Should dashboards be embedded in Beacon or opened in their originating product?
6. What level of cross-product data aggregation is required for Beacon MVP?
7. What notification channels are required: in-app, email, or both?
8. Which QUEDERA brand guidelines, product icons and colour tokens are already approved?

19. Summary

The recommended direction is to make QUEDERA Beacon the central customer portal for the entire QUEDERA portfolio. Beacon should own the common customer experience—portfolio discovery, subscriptions, access, reporting and executive navigation—while Pulse, Duet and Atlas remain authoritative for their specialist workflows and data. This creates a coherent QUEDERA experience without weakening the identity or value proposition of the individual products.
